

Barcode Slot Reader

Quick Guide

REV 2 8013-0006000

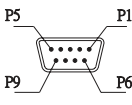

Product Overview

The barcode slot reader is a flexible, cost effective scanning solution. With resolution of up to 5 mils, the it is capable of reading any barcoded identification badge/card. Its sealed optical system is available in both visible light or infrared. The infrared units ensure accurate reading of visible and laminated badges. Its water resistant base and rugged housing make the barcode slot reader ideal for harsh environments. It is suitable for education, time attendance etc.

Cable Pin Assignment:

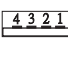

1.) RS232 (D-Sub 9 Female):

Pin	Signal
2	TXD(Out)
3	RXD(In)
5	GND
7	CTS(In)
8	RTS(Out)
9	+5VCC

2.) USB (Type A Male):

Pin	Signal
1	+5VCC
2	Data -
3	Data +
4	GND

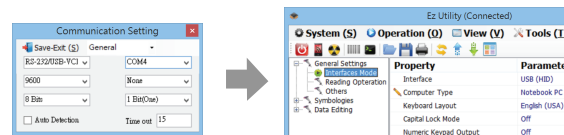

Install Software Utility (Ez Utility)

Ez Utility software utility is the simplest and most user-friendly way to configure your scanner settings. Before the installation please connect the cable to the USB/RS232 port of the host PC/Laptop.

- Contact your local distributor for the latest Ez Utility.
- Download and unzip the file.
- Install Ez Utility.

Configure the Scanner

- Click on  icon from your desktop to launch Ez Utility.
- In Communication Setting window, select "General" as genre, select "USB-HID", or "RS232/USB-VCP" according to the interface of your product.
- Click [Save-Exit (S)] to continue.

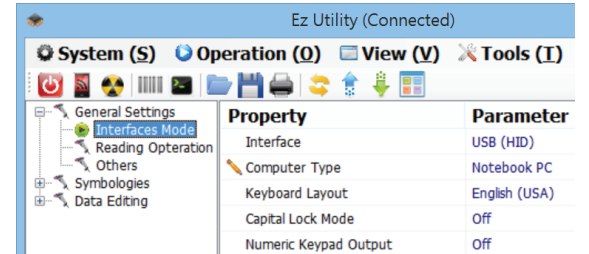

(*Note: Call for help please press [F1] when the program is running.)

- Click on  icon on the toolbar to retrieve scanner's parameters.
- Double click on the items you want to edit and then press [Enter] to save changes.
- Click on  icon on the toolbar to update scanner's parameters.

Icon	Function	Description
	Retrieve Scanner's Parameters	Retrieve scanner's current parameters onto the main window.
	Update Scanner's Parameters	Upload the parameters shown in the main window to the scanner.
	Default	Click this icon can conduct one of the following functions: 1. Undo all changes 2. Reset current parameters to default 3. Reset scanner parameters to default
	Open	Load settings from a saved file.
	Save	The scanner settings will be saved as *.txt or *.bin file, so you can have access to a variety of different scanner configurations that you've set up.

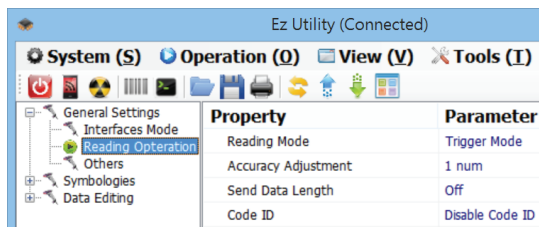

Function Description

- Interface Mode

Interface	Select the interface for making data-input.
Computer Type	Select the device which the scanner is connected.
Keyboard Layout	Default is English (USA)
Capital Lock Mode	When Capital Lock Mode is set to Auto, whether the keyboard CapsLock LED indicator is ON or OFF, output will be always the same as the original data of a barcode.
Numeric Keypad Output	Whether to output the data using Numeric Keypad. This setting is only available for USB-HID interface.
Function Code	Once enabled, the following data encoded in Code39 will be treated as Function Keys: \$TA = [F1], \$TB = [F2], ... \$TL = [F12]
HT/CR/ESC -> TAB/Enter/Escape	Once enabled, HT/CR/ESC (^/I ^M/ ^{) will be sent as TAB/Enter/Escape.
Terminator	The terminator is a command that follows the input of barcode data. Default is "CR" for USB, and "CR+LF" for RS232.
Interblock Delay	Time interval between every two consecutive reads.
Intercharacter Delay	Time interval between every two consecutive characters in an output data.

- Reading Operation

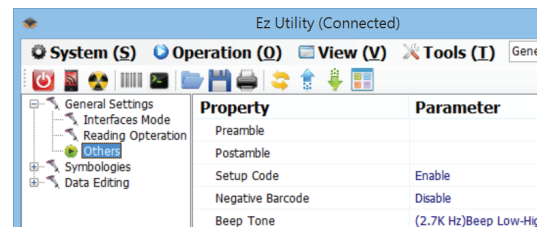

Reading Mode	Default is Trigger Mode (Do not change it)
Accuracy Adjustment	Accuracy Adjustment assures a more reliable decoded output. The higher the value, the greater the accuracy.
Send Data Length	Status of the length of a decoded barcode to be shown before every output data.
Code ID	Status of Code ID to be shown before every output data.

<Code ID>

The Code ID function can be used to identify the type of bar code that is being scanned by inserting an identifying letter at the beginning of the barcode output. For example, if the Code ID function is on, and a barcode string of "54321" was output as "M54321", the barcode would thus be identified as type Code 39. Default is "Disable".

SYMBOLOGIES CODE ID IDENTIFIER					
Symbologies	Factory ID	AIM ID (new)	Symbologies	Factory ID	AIM ID (new)
EAN 128	T	JC1	MSI	O	JM0
Code 128	K	JC0	MSI(MOD 10 / CDV & not send CD)		JM1
EAN8(+2/+5 OFF)		JE4	Code 32	B	JX0
EAN8(+2 ON)	S	JE4	Codabar		JF0
EAN8(+5 ON)		JE4	Codabar(ABC Codabar)	N	JF1
UPC-E(+2/+5 OFF)		JE0	Codabar(CDV & Send CD)		JF2
UPC-E(+2 ON)	E	JE3	Codabar(CDV & not send CD)		JF4
UPC-E(+5 ON)		JE3	UK Plessey	P	JP0
UPC-A(+2/+5 OFF)		JE0	Matrix 2 of 5	Y	JX0
UPC-A(+2 ON)	A	JE3	Full ASCII Code 39(disable CDV)		JA4
UPC-A(+5 ON)		JE3	Full ASCII Code 39(CDV & send CD)	D	JA5
EAN-13(+2/+5 OFF)		JE0	Full ASCII Code 39(CDV & not send CD)		JA7
EAN-13(+2 ON)	F	JE3	Standard Code 39(disable CDV)		JA0
EAN-13(+5 ON)		JE3	Standard Code 39(CDV & send CD)	M	JA1
Code 93	L	JG0	Standard Code 39(CDV & not send CD)		JA3
Code 11(disable CDV)		JH0	Interleaved 2 of 5(CDV & send CD)		JI1
Code 11(send one CD)		JH0	Interleaved 2 of 5(CDV & not send CD)	I	JI3
Code 11(send two CD)	J	JH1	Interleaved 2 of 5(disable CDV)		JI0
Code 11(not send CD)		JH3	Databar		
Telepen(ASCII)	U	JB0	Databar Stacked	G	
Telepen(Numeric)		JB1	Databar Stacked Omnidirectional		
IATA 2 of 5	R	JR0	Databar Truncated		
Industrial 2 of 5	V	JS0	Databar Limited	C	
China Post Code	H	JX0	Databar Expanded		
PDF417	Z	JE0	Databar Expanded Stacked	Q	

- Others

Preamble	Preamble can be a prefix of up to 16 digits composed of alphanumeric characters/ function codes added to the beginning of an output data.
Postamble	Postamble can be a suffix of up to 16 digits composed of alphanumeric characters/ function codes added to the end of an output data.
Setup Code	Disabling Setup Code will turn the scanner into unprogrammable state and the scanner will not react to any setup/config barcode.
Negative Barcode	Status of negative/inverse barcode decoding capability.
Beep Tone	Beep tone for good read indication.

<Preamble & Postamble (Prefix and Suffix)>

EXAMPLE:
Set PREAMBLE String as " ## "
POSTAMBLE String as " \$\$ "

Setting Procedure:

- Double-click Preamble, and a Special Keyboard window will show up.
- Input "##" in the first column and click [Next] before input the second "##".
- Click [Save-Exit] to save changes.
- Double click Postamble and input two "\$" in the same way as Preamble.

*Data Format: { Preamble } { CodeID } { Barcode Data } { Postamble } {Terminator}

Trouble Shooting

Most problems that you might encounter with your scanner can be solved using the following procedures:

• Try scanning other barcodes.

If your scanner can scan other types of barcode symbologies, but cannot scan your barcodes, first check to see if your particular barcode symbology is enabled. If it is, try the scanner on the same barcode type in the Barcode Test Chart in the back of this manual. Then, ensure that your barcodes are crisp and clear.

• Reset to Factory Default.

While the Ez Utility program is running, please click  icon on the toolbar to

reset the scanner back to factory default.

*Notice: This action will remove all changes of configurations you have made.

- **Test the scanner on other ports.**

Our scanners are built to the highest standards, and a perceived scanner malfunction may actually be a malfunction in the host computer. Test the scanner on the host's other ports if possible or, if necessary, on other systems to verify that the problem is actually in the scanner and not in the host computer.

Q1. Scanner doesn't light up.

If the scanner does not emit a light when plugged in, check the interface. If the scanner uses an RS232 interface, you will very likely need a power supply (5V, >120mA). Unplug the scanner and plug it back in.

Try the scanner on another port if possible. Re-boot the computer.

If the scanner still doesn't light up, try the scanner on another computer to ensure that the fault isn't in the original computer.

Q2. Scanner lights up but doesn't beep.

If the scanner emits a light, but doesn't beep when scanning a bar code, try bar codes of different symbologies. If other types of bar codes scan properly, then it might be that the scanner is not configured to scan your particular symbology. If the scanner can scan other bar codes of the same symbology, then other parameters (such as mini-mum/maximum length, etc.) may have to be adjusted. Ensure that your bar code has been created properly, with crisp edges and start/stop sentinels. For instance, Code 39 bar codes require asterisk (*) start/stop sentinels at the beginning and end of the data string ("*123ABC*"). Avoid glossy surfaces or glossy inks for your bar codes. A glossy black surface may be indistinguishable from a white surface to your scanner. Try photocopying your barcode and scanning the copy to determine if glossiness may be a factor.

Q3. No output from scanner.

If the scanner appears to scan (emits a light and beeps), but does not output data, try scanning into a word processor application or Notepad session to see if it's a software problem. Try the scanner on other ports to see if it's a computer port problem. If your scanner is connected by RS232 interface, make sure that the correct com port is selected. If you're testing your scanner in HyperTerminal, make sure that "Bits per second" = 9600, "Data bits" = 8, "Parity" = None, "Stop bits" = 1, and "Flow control" = None.

Q4. Ez Utility cannot upload or download

Ez Utility can currently conduct two-way communication (upload and download) in all Windows operating system (NT excluded). If you have a different OS, or the download function doesn't work, set up your scanner's configuration in EZU off-line. And then, instead of uploading, click the  icon on the toolbar to print out the configuration barcodes so that you can then cut them into barcode strips and swipe them respectively to configure the scanner manually.

Warranty

Limited Hardware Warranty

The Limited Warranty terms described below are solely applicable to the customer. This warranty applies to equipment only. All consumables and accessories are exempted.

We warrant the products to be delivered free from defects in material and workmanship, from the date of purchase. All equipment except for cables, batteries and power supplies are warranted for a period of twelve months (beginning from the month of delivery). Some products may have longer warranties, but all products (except for cables, batteries and power supplies) carry at least a one year warranty. All cables, batteries and power supplies, external to dedicated products carry a ninety day warranty.

During this warranty period we will, at our sole discretion, replace or repair free of charge any product(s) which, in our opinion, is/are defective. Any merchandise that is to be returned must have a valid Return Merchandise Authorization (RMA) number clearly indicated on the outside of the returned package and on the accompanying packing list. We cannot be held responsible for any package returned without a RMA number. To obtain a RMA number, please contact Customer Service Department or Sales Representative of your local distributor.

The Customer is responsible for packing the defective product properly, and for the cost of shipping the defective product to us. We are responsible for shipping back the product which is repaired or replaced. If any charges borne by the Customer, the invoice for the repaired or replaced product(s) will be sent to the Customer's payment terms.

In the event that the product has been modified without 's consent or if the product failure is the result of misuse, abuse, willful neglect or misapplication. We have no

obligation to repair or replace the product.

Except as expressly mentioned above, the hardware and accompanying written materials (including the user's manual) are provided "as is" without warranty of any kind, including the implied warranties of merchant ability and fitness for a particular purpose, even we have been advised of that purpose. In no event will we be liable for any direct, indirect, consequential, or incidental damages arising out of the use of or inability to use such product(s), even if we have been advised of the possibility of such damages.

Specifications

PERFORMANCE	
Light Source	Visible Light: 660nm LED Infrared Light: 850nm LED
Depth of field	2 mm (CODE-39 5mil)

Appendix 2- Barcode Test Chart

The image displays five distinct barcode formats, each with its corresponding numerical data and label:

- EAN-13:** A standard 13-digit barcode. The numbers 3 045214 834123 are printed below the bars, and the label "EAN-13" is centered below.
- MSI Code:** A 65-barcode used for inventory. The numbers 1234558 are printed below the bars, and the label "MSI Code" is centered below.
- UPC-A:** A standard 12-digit barcode. The numbers 0 47669 13716 6 are printed below the bars, and the label "UPC-A" is centered below.
- Interleaved 2 of 5:** A barcode where digits are represented by pairs of bars. The numbers 0987654321 are printed below the bars, and the label "Interleaved 2 of 5" is centered below.
- Standard 2 of 5:** A barcode where digits are represented by pairs of bars. The numbers 1122334455 are printed below the bars, and the label "Standard 2 of 5" is centered below.
