Appendix 1 Default table.....	51-54
-------------------------------	-------

# CLONING MODE

## WHAT IS CLONING MODE?

CLONING duplicates a scanner's settings in other scanners. It can save time when a number of scanners must be programmed to the same settings.

## HOW SHOULD CLONING WORK?

1. Using this guide, make all the necessary settings for one wand.
2. Scan the CLONING MODE bar code shown below.
3. When CLONING MODE is scanned, all setup parameters will be converted to alphanumeric characters and shown on the monitor.
4. Using a bar code printer, print out all the setup parameters as Code 39 bar code labels.
5. Scan the printed labels sequentially with each wand to be programmed.

## NOTES:

1. All cloning strings are upper case.
2. All cloning strings printed on labels should be the same as those on the monitor sequentially from first to last.
3. Cloning mode works in Word Note Pad only.
4. Never edit the data on the first row (.A017\$). It is an entry command for cloning.
5. The cloning string's length can be adjusted by combining multiple strings into one, or by breaking one string into multiple strings starting from the second row after "...". Length must be in sequences of four, such as 4, 8, 12, 16, 20 (MAX).
6. Be sure to print the dots exactly where they are shown on the monitor.

## FORMAT OF CLONING

\* Format of Cloning:

1st row >>> ".A017\$" ( never edit any data of the first row )

2nd row >>> "...XXXX" you can adjust the String's Length starting from the dots "..." forward. The length of the string should be in 4, 8, 12, 16 or 20 ( MAX ) digits.

3rd row ~ so on >>> XXXX

End row - A dot "." Is the ending of cloning.

XXXX Stands for any string

# CLONING MODE

## EXAMPLE :

### 1. PROJECT ASSIGNMENTS:

- 1.1. Beep tone: **BEEP LOW**
- 1.2. Capslock Mode: **CAPSLOCK ON.**

### 2. SETTING PROCEDURE:

- 2.1. Scan **BEEP LOW (GROUP 4).**
- 2.2. Scan **CAPSLOCK ON (GROUP 14).**

3. All parameters will be converted to alphanumeric characters and shown on the monitor.

4. Print the results shown on the monitor as bar codes with a bar code printer. The bar codes should be in the Code 39 symbology.

5. Scan these labels with any of the wands that must be programmed with the same settings as the first wand. Be sure to scan from the first row to the second and so on sequentially, top to bottom.

## CORRECT SETTING

.A017\$ .... 0604 5A02 5F04 .	4 4 4 4 . (Dot)	.A017\$ ....06045A02 5F04.	12 4+.(Dot)
----------------------------------------------	-----------------------------	----------------------------------	----------------

## WRONG SETTING

<div style="border: 1px solid black; padding: 5px;">                 .A017\$  <span style="background-color: black; color: white; display: inline-block; width: 100px; height: 1em; margin-bottom: 5px;"></span>                  ..0604                  5A02                  5F04                  .             </div>	←	<p><b>Wrong Setting:</b> The string “...” consists of 4 Dots, located at the beginning of second row; do not break the “...” into multiple strings.</p>
<div style="border: 1px solid black; padding: 5px;">                 .A017\$  <span style="background-color: black; color: white; display: inline-block; width: 100px; height: 1em; margin-bottom: 5px;"></span>                  ....06045                  A025F04                  .             </div>	✓ 9 x } 7 x } ←	<p><b>Wrong Setting:</b> The string lengths of the second and third row do not match the length requirements, because rows should be in length of four digits.</p>
<div style="border: 1px solid black; padding: 5px;">                 .A017\$....                  0604                  5A02                  5F04.             </div>	X ←	<p><b>Wrong Setting because you add “....” after .A017\$:</b>                  The .A017\$ is a FIXED parameter to enter setup procedure. It is an unchangeable parameter. <b>Never add, delete or rearrange data from the FIRST row.</b></p>

# HOW TO SET PARAMETERS

## How do you program a scanner with this user's guide?

1. Use the scanner to scan at the barcode representing the function/parameter you want to set.
2. When you hear two beeps, the new settings have been defined or updated into the memory processor.

Default parameters are indicated in bold type and underlined characters. The character font is ARIAL BLACK. CD = Check Digit. CDV = Check Digit Verification.

Most settings require only a single barcode, but a few need several different barcodes (multi-step configuration) to be scanned in order to completely define a setting. They are:

### **Preamble / Postamble (maximum 16 digits)**

Step 1: Scan CLR PRE/POSTAMBLE.

Step 2: Scan PREAMBLE or POSTAMBLE.

Step 3: Scan any alphanumeric from Full ASCII table in Group 34-45

Step 4: Scan PREAMBLE or POSTAMBLE.

### **Min Length / Max Length**

Step 1: Scan MIN LENGTH or MAX LENGTH.

Step 2: Scan two digits from Full ASCII numeric table in Group 42

Step 3: Scan MIN LENGTH or MAX LENGTH.

### **Accuracy Adjustment**

Step 1: Scan ACCURACY ADJUSTMENT.

Step 2: Scan one digit from GROUP 8

Step 3: Scan ACCURACY ADJUSTMENT.

### **Set Code ID (Example: Code 39)**

Step 1: Scan CODE 39 SET ID from Group 9

Step 2: Scan either one or two alphanumerics (maximum 2 digits) from Full ASCII table in Group 36-42

Step 3: Scan CODE 39 SET ID from Group 9

### **Set A Data - (CX-Codabar, ABC Codabar, Codabar Coupling).**

Step 1: Scan SET INSERT DATA.

Step 2: Scan one alphanumeric character from Full ASCII Table in Group 36-42

Step 3: Scan SET INSERT DATA.

## **NOTE:**

1. The scanner will beep three times as indication that a setting is not yet complete or unexpected barcode is scanned during multi-step configuration.
2. If you make a mistake, forget a step, etc., and want to abort the multi-step configuration, scan RESET/ABORT and start over again.

**RESET / ABORT**

# GROUP-1

## GENERAL SETTINGS

---

### DEFAULT

.A001\$

\*Reset to factory default

---

### CHECK VERSION

.A007\$

\*Check firmware version

---

### RESET/ ABORT

.P023\$

\*Abort multi-step configuration

---

### SETUP CODE READ

.B015\$

SETUP CODE ON

.B016\$

SETUP CODE OFF

\*Caution: Scanning SETUP CODE OFF will turn the scanner into unprogrammable state and the scanner will not react to any configuration barcode!

# GROUP-2

## READING MODE, ADVANCED SETTINGS

---

### READING MODE

. F005\$

CONTINUOUS MODE

\* LED is always on.

. F007\$

AUTO SENSING MODE

\* The LED turn on automatically when an object is detected.

\* LED will turn off if no object is detected after LED Auto-off Timeout elapses. (The default is 3 sec.)

. F004\$

TEST MODE

\* Factory Scanability Test Use Only

---

. F030\$

LED AUTO OFF TIMEOUT  
(DEFAULT = 3 SEC)

### LED AUTO-OFF TIMEOUT (AUTO SENSING MODE)

#### STEPS:

1. Scan LED AUTO-OFF TIMEOUT
2. Scan two digits (03~60) from Full ASCII numeric table (Group42)  
(unit = 1 sec, range = 3 sec ~ 60 sec, Default = 60 sec)
3. Scan LED AUTO-OFF TIMEOUT

---

. F040\$

IDENTICAL READ INTERVAL  
(DEFAULT = 1.0 SEC)

### IDENTICAL READ INTERVAL (CONTINUOUS & AUTO SENSING MODE)

#### NOTE:

1. The interval will start counting only after the scanned barcode is removed from the aimer of scanner. If you want to read the same barcode continuously without any timeout, please use Test Mode.

#### STEPS:

1. Scan IDENTICAL READ TIMEOUT
2. Scan two digits (01~50) from Full ASCII numeric table (Group 42)  
(unit = 100mS, range = 100mS ~ 5000mS, Default = 1000mS)
3. Scan IDENTICAL READ TIMEOUT

# GROUP-3

## AUTO SENSING RANGE, FIXED SCAN RATE

---

### AUTO SENSING RANGE

. F056\$

NEAR (approx. 13cm)

. F057\$

MIDDLE (approx. 20cm)

. F058\$

FAR (approx. 27cm)

---

### FIXED SCAN RATE

. B036\$

DISABLE  
(AUTO-ADAPTIVE)

. B035\$

ENABLE  
(FIXED SCAN RATE)

\*Once enabled, scan rate will be fixed at top speed, optimized for moving barcode reading, at the cost of reduced reading range.

# GROUP-4

## BEEP TONE, TERMINATOR

---

### BEEP TONE

.F019\$

BEEP HIGH

.F018\$

BEEP MEDIUM

.F012\$

BEEP OFF

.F022\$

BEEP LOW

---

### TERMINATOR

.D010\$

NONE

.D011\$

LF

.D012\$

CR

.D013\$

CR+LF

.D014\$

TAB

.D015\$

SPACE

.D016\$

ESC

### NOTES:

Below is the position of Terminator among output data string:

[Preamble] [Symbology ID] [Barcode Length] [Barcode Data] [Postamble] [**Terminator**]

By default, with Preamble, Postamble, Barcode Length and Symbology ID disabled, the scanner data output will be:

[Barcode Data] [**Terminator**]

1. For the USB HID interface the default terminator is CR.
2. For the USB VCP interface the default terminator is CR+LF.

# GROUP-5

## SEND DATA LENGTH, PREAMBLE & POSTAMBLE

### SEND DATA LENGTH

.D019\$

SEND DATA LENGTH ON

.D020\$

SEND DATA LENGTH OFF

---

### PREAMBLE & POSTAMBLE ( PREFIX AND SUFFIX )

.A011\$

CLEAR PRE/ POSTAMBLE

.A012\$

PREAMBLE (16)

.A013\$

POSTAMBLE (16)

### EXAMPLE:

Set PREAMBLE String as “##”

POSTAMBLE String as “\$\$”

### SETTING PROCEDURE:

STEP 1 : Scan : CLEAR PRE/ POSTAMBLE.

STEP 2 : Scan : PREAMBLE.

STEP 3 : Scan : “#” twice from FULL ASCII Table (Group 36)

STEP 4 : Scan : PREAMBLE.

STEP 5 : Scan : POSTAMBLE.

STEP 6 : Scan : “\$” twice from FULL ASCII Table (Group 36)

STEP 7 : Scan : POSTAMBLE.

### DATA FORMAT:

[Preamble] [Symbology ID] [Barcode Length] [Barcode Data] [Postamble] [Terminator]

### NOTES:

1. A PREAMBLE is a string of up to 16 characters added to the beginning of a scanned barcode.
2. A POSTAMBLE is a string of up to 16 characters added to the end of a scanned barcode.
3. Default value for both: None.

# GROUP-6

## ACCURACY ADJUSTMENT

---

---

**ACCURACY  
ADJUSTMENT**

Accuracy Adjustment assures a more reliable decoded output. Enabling the feature and setting a number from 1 to 9 subjects the decoded output a higher standard of accuracy. The higher the number, the greater the accuracy.

---

### STEPS:

1. Scan ACCURACY ADJUSTMENT.
2. Scan one digit (0~9) from barcode menu above.  
(Default = 1)
3. Scan ACCURACY ADJUSTMENT.

### NOTE:

1. The scanner will beep three times as indication that a setting is not yet complete or unexpected barcode is scanned during multi-step configuration.
2. If you make a mistake, forget a step, etc., and want to abort the multi-step configuration, scan RESET/ABORT and start over again.

**RESET / ABORT**

# GROUP-7

## INVERSE BARCODE, CODE ID

---

### ENABLE INVERSE BARCODE

.D021\$

DISABLE INVERSE BARCODE  
(READS POSITIVE BARCODE ONLY)

.D022\$

ENABLE INVERSE BARCODE  
(READS POSITIVE & NEGATIVE BARCODES)

---

### ENABLE CODE ID

.A008\$

FACTORY ID ON

.A014\$

AIM ID ON

.A015\$

SET ID ON

---

### DISABLE CODE ID

.A009\$

### NOTES:

1. Only ONE code ID will be sent.
2. The code ID is located at the position before the barcode data and after the preamble.

### EXAMPLE :

- 1.Preamble 145287,
- 2.Code ID: enable AIM ID,
- 3.Bar code symbologies : EAN 13+5

145287	JE0	4563987123453	12411
Preamble 145287	CODE ID AIM ID : JE0	BARCODE / DATA EAN 13 +5	
OUTPUT : 145287JE0456398712345312411

## CAPITAL LOCK MODE, NUMERIC KEY

### **CAPITAL LOCK MODE**

CAPSLOCK ON

CAPSLOCK OFF

CAPSLOCK FREE

### **NOTE:**

1. When barcode scanner is set to Capslock Free mode, no matter keyboard Capslock LED indicator is ON or OFF, output will be always the same as the Original barcode. In other words, what you see is what output is.(CODABAR is the exception)
2. If ABCD/ ABCD, abcd/ abcd, ABCD/T\*E, abcd/tn\*e are on, they work independently according to their rules.

### **NUMERIC KEY**

NUMERIC KEY

ALPHANUMERIC KEY

### **NOTE:**

1. By default, the alphanumeric key is used for transmitting digits. Scan NUMERIC KEY if you want to use the keys on the numeric keypad.
2. If you select NUMERIC KEY, the Num Lock status of the physical keyboard should be ON.

# GROUP-15

## INTERFACE

---

### INTERFACE

. C008\$

USB HID

. C006\$

USB VCP

### NOTE:

1. This scanner is designed to switch easily between interface options. To switch from one interface to another, the appropriate cable must be installed. After changing to a new cable, be sure to reset the interface setting as appropriate.
2. Before switching to USB VCP, please make sure you have installed proper driver on PC. The driver is available either on our website or from your local distributor.

\* The data can be any alphanumerics of FULL ASCII Table (GROUP 36-42)

### NOTE:

ABC-CODABAR (American Blood Commission). The ABC Code is an acronym for American Blood Commission. This bar code is a variant of the CODABAR Code developed for the use in the blood bank. This Code consists of two bar codes which are decoded in one read cycle. The code is concatenated when the stop character of the first bar code and the start character of the second bar code is a " D ", these two " D " are not transmitted.

---

ON

OFF

SET INSERT DATA\*

### CX CODE- CODABAR

INSERT DATA- ON

INSERT DATA- OFF

\* The data can be any alphanumerics of FULL ASCII Table (GROUP 36-42)

### NOTE:

The CX-Code consists of two bar codes which are decoded in one read cycle, the code is concatenated when the stop character of the first bar code is a C, and the start character of the second bar code is a B. The B and C characters are not transmitted.

# GROUP-25

## CODABAR COUPLING, ADJACENT REQUIRED

### CODABAR COUPLING

ABC-Codabar and CX-Codabar have certain rules regarding the Stop Character of first bar code and the stop character of second bar code while in conjunction, while Codabar-Coupling is enabled, the data from any two Codabar bar codes can be coupled into one set of data without any limitations between the Stop character of first bar code and the Start character of second bar code. The Start and Stop characters associated with each bar code will be sent.

\* *The data can be any alphanumerics of FULL ASCII Table (GROUP 36-42)*

### ADJACENT REQUIRED

If CODABAR ADJACENT is enabled, the scanner will only read two adjacent Codabar barcodes; a single barcode will not be read.

#### NOTE:

1. Both ABC-Codabar and CX-Codabar can be enabled together, except when Codabar-Coupling is also enabled.
2. If ABC-Codabar, CX-Codabar, and Codabar-Coupling are all enabled at the same time, the scanner will read only Codabar-Coupling, that is, ABC-Codabar, CX-Codabar will be considered coupling formats.

### STEPS:

1. Scan SET INSERT DATA.
2. Scan any combination of alphanumeric characters from FULL ASCII Table.
3. Scan SET INSERT DATA.

### NOTE:

1. The scanner will beep three times as indication that a setting is not yet complete or unexpected barcode is scanned during multi-step configuration.
2. If you make a mistake, forget a step, etc., and want to abort the multi-step configuration, scan RESET/ABORT and start over again.

**RESET / ABORT**

# GROUP-26

## STANDARD & FULL ASCII CODE 39, CODE 32

---

### STANDARD CODE 39 & FULL ASCII 39

### NOTE:

The default for Code 39 is Standard Code 39. If Full ASCII Code 39 is enabled, Standard Code 39 will be automatically disabled.
