Ez One Shot®

1D WIRELESS SCANNER USER'S MANUAL

Version: 2019.1

CONTENTS

CLONING MODE

WHAT IS CLONING MODE?

CLONING duplicates a scanners settings in other scanners. It can save time when a number of scanners must be programmed to the same settings.

HOW SHOULD CLONING WORK?

1. Using this guide, make all the necessary settings for one wand.
2. Scan the CLONING MODE bar code shown below.
3. When CLONING MODE is scanned, all setup parameters will be converted to alphanumeric characters and shown on the monitor.
4. Using a bar code printer, print out all the setup parameters as Code 39 bar code labels.
5. Scan the printed labels sequentially with each wand to be programmed.

CLONING MODE

Figure 1

NOTES:

1. All cloning strings are upper case.
2. All cloning strings printed on labels should be the same as those on the monitor sequentially from first to last.
3. Cloning mode works in Word Note Pad only.
4. Never edit the data on the first row (.A017$). It is an entry command for cloning.
5. The cloning string's length can be adjusted by combining multiple strings into one, or by breaking one string into multiple strings starting from the second row after "....". Length must be in sequences of four, such as 4, 8, 12, 16, 20 (MAX).
6. Be sure to print the dots exactly where they are shown on the monitor.

FORMAT OF CLONING

* Format of Cloning:

1st row >>> ".A017$" (never edit any data of the first row)

2nd row >>> "....XXXX" you can adjust the String's Length starting from the dots "...." forward. The length of the string should be in 4, 8, 12, 16 or 20 (MAX)digits.

3rd row ~ so on >>> XXXX

End row - A dot "." Is the ending of cloning.

XXXX Stands for any string

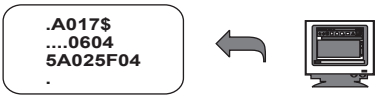
CLONING MODE

EXAMPLE :

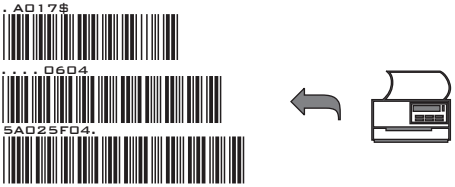
1. PROJECT ASSIGNMENTS:
1.1. Beep tone: **BEEP LOW**
1.2. Capslock Mode: **CAPSLOCK ON.**
1.3. Reading Mode: **CONTINUOUS AUTO OFF.**

2. SETTING PROCEDURE:
2.1. Scan **BEEP LOW (GROUP 6).**
2.2. Scan **CAPSLOCK ON (GROUP 16).**
2.3. Scan **CONTINUOUS AUTO OFF (GROUP2).**

3. All parameters will be converted to alphanumeric characters and shown on the monitor.



4. Print the results shown on the monitor as bar codes with a bar code printer. The bar codes should be in the Code 39 symbology.



5. Scan these labels with any of the wands that must be programmed with the same settings as the first wand. Be sure to scan from the first row to the second and so on sequentially, top to bottom.

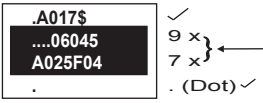
CORRECT SETTING

.A017$	
....	4
0604	4
5A02	4
5F04	4
.	. (Dot)

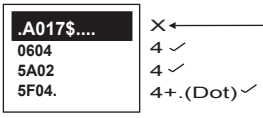
.A017$	
....06045A02	12
5F04.	4+.(Dot)

WRONG SETTING

Wrong Setting: The string "...." consists of 4 Dots, located at the beginning of second row; do not break the "...." into multiple strings.



Wrong Setting: The string lengths of the second and third row do not match the length requirements, because rows should be in length of four digits.



Wrong Setting because you add "...." after .A017$:
The .A017$ is a FIXED parameter to enter setup procedure. It is an unchangeable parameter. **Never add, delete or rearrange data from the FIRST row.**

HOW TO SET PARAMETERS

How do you program a scanner with this user's guide?

1. Use the scanner to scan at the barcode representing the function/ parameter you want to set.
2. When you hear two beeps, the new settings have been defined or updated into the memory processor.

Default parameters are indicated in bold type and underlined characters. The character font is ARIAL BLACK. CD = Check Digit. CDV = Check Digit Verification.

Most settings require only a single barcode, but a few need several different barcodes (multi-step configuration) to be scanned in order to completely define a setting. They are:

Preamble / Postamble (maximum 16 digits)
Step 1: Scan CLR PRE/POSTAMBLE.
Step 2: Scan PREAMBLE or POSTAMBLE.
Step 3: Scan any alphanumeric from Full ASCII table in Group 49-60
Step 4: Scan PREAMBLE or POSTAMBLE.

Min Length / Max Length
Step 1: Scan MIN LENGTH or MAX LENGTH.
Step 2: Scan two digits from Full ASCII numeric table in Group 57
Step 3: Scan MIN LENGTH or MAX LENGTH.

Accuracy Adjustment
Step 1: Scan ACCURACY ADJUSTMENT.
Step 2: Scan one digit from GROUP 8
Step 3: Scan ACCURACY ADJUSTMENT.

Set Code ID (Example: Code 39)
Step 1: Scan CODE 39 SET ID from Group 11
Step 2: Scan either one or two alphanumerics (maximum 2 digits) from Full ASCII table in Group 51-57
Step 3: Scan CODE 39 SET ID from Group 11

Set A Data - (CX-Codabar, ABC Codabar, Codabar Coupling).
Step 1: Scan SET INSERT DATA.
Step 2: Scan one alphanumeric character from Full ASCII Table in Group 51-57
Step 3: Scan SET INSERT DATA.

NOTE:

1. The scanner will beep three times as indication that a setting is not yet complete or unexpected barcode is scanned during multi-step configuration.
2. If you make a mistake, forget a step, etc., and want to abort the multi-step configuration, scan RESET/ABORT and start over again.

RESET / ABORT

GROUP-1

GENERAL SETTINGS

DEFAULT

.A001$

*Reset to factory default

CHECK VERSION

.A007$

*Check firmware version

RESET/ ABORT

.P023$

*Abort multi-step configuration

SETUP CODE READ

.B015$

SETUP CODE ON

.B016$

SETUP CODE OFF

*Caution: Scanning SETUP CODE OFF will turn the scanner into unprogrammable state and the scanner will not react to any configuration barcode!

VIBRATOR

.D035$

VIBRATOR OFF

.D034$

VIBRATOR ON

NOTE:

1. Not supported by MT100A, MT3000LB.

GROUP-2

READING MODE

CONTINUOUS MODE

* LED is always on.
* The trigger does not function in Continuous Mode.

FLASH MODE

* The LED is on steady if a barcode is close to the scanner, but starts flashing if no barcode is detected after 60 seconds.
* The trigger does not function in Flash Mode.

TRIGGER MODE

* The LED will turn on when the trigger is pressed.
* The LED will turn off when the trigger is released.

CONTINUOUS AUTO OFF

* The LED is always on when the trigger is pressed.
* The LED will go off if no barcode has been detected after 60 seconds.

TOGGLE MODE

* The LED is always on when the trigger is pressed.
* The LED will go off if one barcode is read.

TEST MODE

* Factory Scanability Test Use Only

GROUP-3

ADVANCED READING MODE SETTINGS

LED AUTO-OFF CONTROL (TRIGGER & TOGGLE MODE)

. F038$

LED AUTO OFF DISABLE

. F039$

LED AUTO OFF ENABLE

NOTE:

1. When enabled, LED will automatically go off after LED Auto-Off Timeout elapses.

LED AUTO-OFF TIMEOUT (TRIGGER, TOGGLE, FLASH, CONTINUOUS AUTO OFF MODE)

. F043$

LED AUTO OFF TIMEOUT
(DEFAULT = 60 SEC)

STEPS:

1. Scan LED AUTO-OFF TIMEOUT
2. Scan two digits (01~60) from Full ASCII Code39 numeric table (unit = 1 sec, range = 1 sec ~ 60 sec, Default = 60 sec)
3. Scan LED AUTO-OFF TIMEOUT

FLASH TIMEOUT (FLASH MODE)

. F041$

FLASH TIMEOUT
(DEFAULT = 60 SEC)

STEPS:

1. Scan FLASH TIMEOUT
2. Scan two digits (03~60) from Full ASCII Code39 numeric table (unit = 1 sec, range = 3 sec ~ 60 sec, Default = 60 sec)
3. Scan FLASH TIMEOUT

LED AUTO-OFF TIMEOUT (CONTINUOUS AUTO OFF MODE)

. F042$

LED AUTO OFF TIMEOUT
(DEFAULT = 60 SEC)

STEPS:

1. Scan LED AUTO OFF TIMEOUT
2. Scan two digits (03~60) from Full ASCII Code39 numeric table (unit = 1 sec, range = 3 sec ~ 60 sec, Default = 60 sec)
3. Scan LED AUTO OFF TIMEOUT

GROUP-4

ADVANCED READING MODE SETTINGS

TRIGGER CONTROL (FLASH, CONTINUOUS & TEST MODE)

. F036$

TRIGGER CONTROL DISABLE

. F037$

TRIGGER CONTROL ENABLE

NOTE:

1. When enabled, LED can be switched on/off by pressing trigger.

IDENTICAL READ INTERVAL (FLASH, CONTINUOUS & CONTINUOUS AUTO OFF MODE)

. F040$

IDENTICAL READ INTERVAL
(DEFAULT = 1.0 SEC)

NOTE:

1. The interval will start counting only after the scanned barcode is removed from the aimer of scanner. If you want to read the same barcode continuously without any timeout, please use Test Mode.

STEPS (for MT110(M), MT110L(M), MT300L):

1. Scan IDENTICAL READ TIMEOUT
2. Scan two digits (01~50) from Full ASCII Code39 numeric table (Group 46) (unit = 100mS, range = 100mS ~ 5000mS, Default = 1000mS)
3. Scan IDENTICAL READ TIMEOUT

STEPS (for MT1297, MT100A, MT3000LB):

1. Scan IDENTICAL READ TIMEOUT
2. Scan two digits (1~5) from Full ASCII Code39 numeric table (Group 46) (unit = 1 sec, range = 1 sec ~ 5 sec, Default = 1 sec)
3. Scan IDENTICAL READ TIMEOUT

GROUP-5

LASER BRIGHTNESS, ILLUMINATION

LASER BRIGHTNESS

NOTES:

Below is the position of Terminator among output data string:

[Preamble] [Symbology ID] [Barcode Length] [Barcode Data] [Postamble] **[Terminator]**

By default, with Preamble, Postamble, Barcode Length and Symbology ID disabled, the scanner data output will be:

[Barcode Data] **[Terminator]**

1. For the USB HID/BT HID interface the default terminator is CR.
2. For the USB VCP/BT SPP interface the default terminator is CR+LF.

GROUP-7

SEND DATA LENGTH, PREAMBLE & POSTAMBLE

SEND DATA LENGTH

.D019$

SEND DATA LENGTH ON

.D020$

SEND DATA LENGTH OFF

PREAMBLE & POSTAMBLE (PREFIX AND SUFFIX)

.A011$

CLEAR PRE/ POSTAMBLE

.A012$

PREAMBLE (16)

.A013$

POSTAMBLE (16)

EXAMPLE:

Set PREAMBLE String as " ## "
POSTAMBLE String as " $$ "

SETTING PROCEDURE:

STEP 1 : Scan : CLEAR PRE/ POSTAMBLE.
STEP 2 : Scan : PREAMBLE.
STEP 3 : Scan : " # " twice from FULL ASCII Table (Group 51)
STEP 4 : Scan : PREAMBLE.
STEP 5 : Scan : POSTAMBLE.
STEP 6 : Scan : " $ " twice from FULL ASCII Table (Group 51)
STEP 7 : Scan : POSTAMBLE.

DATA FORMAT:

[Preamble] [Symbology ID] [Barcode Length] [Barcode Data] **[Postamble]** [Terminator]

NOTES:

1. A PREAMBLE is a string of up to 16 characters added to the beginning of a scanned barcode.
2. A POSTAMBLE is a string of up to 16 characters added to the end of a scanned barcode.
3. Default value for both: None.

GROUP-8

ACCURACY ADJUSTMENT

4

5

6

7

8

9

ACCURACY ADJUSTMENT

.AD10$

Accuracy Adjustment assures a more reliable decoded output. Enabling the feature and setting a number from 1 to 9 subjects the decoded output a higher standard of accuracy. The higher the number, the greater the accuracy.

STEPS:

1. Scan ACCURACY ADJUSTMENT.
2. Scan one digit (0~9) from barcode menu above. (Default = 1)
3. Scan ACCURACY ADJUSTMENT.

NOTE:

1. The scanner will beep three times as indication that a setting is not yet complete or unexpected barcode is scanned during multi-step configuration.
2. If you make a mistake, forget a step, etc., and want to abort the multi-step configuration, scan RESET/ABORT and start over again.

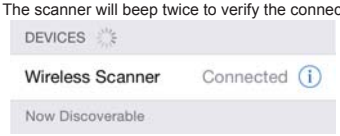
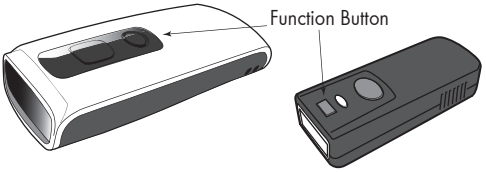
4. Select “Wireless Scanner” from discovered device list.

5. The scanner will beep twice to verify the connection.



Touch Keyboard - iOS

While connected with the scanner, the Touch Keyboard on the iOS device might disappear. To resolve this issue, please simply press the function button to toggle iOS Touch Keyboard.

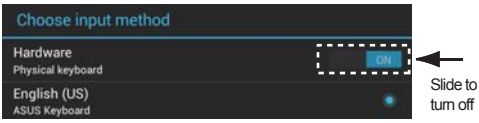


For scanner with only one button, please refer to iOS Hotkey in the next page.

Touch Keyboard - Android

While connected with the scanner, the Touch Keyboard on the Android smartphone or tablet might disappear. To resolve this issue, please change settings on Android device with below steps:

1. Enter “Settings”
2. Enter “Language & input”
3. Tap on “Default keyboard”
4. Turn off “Physical keyboard”, or Turn on “On-screen keyboard” and the Touch Keyboard will function properly again.



GROUP-21

iOS HOTKEY, SET FUNCTION BUTTON

iOS HOTKEY

. E047$

ENABLE iOS HOTKEY

. E048$

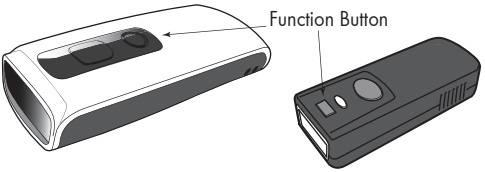
DISABLE iOS HOTKEY

NOTE:

1. After enabling iOS Hotkey(disabled by default), you may simply double-click the trigger to toggle the iPhone/iPad Touch Keyboard.
2. Only supported by MT100A, MT3000LB.

SET FUNCTION BUTTON

You may define the data to be sent to the host when function button is pressed during connection.



. E060$

SET FUNCTION BUTTON
(DEFAULT = iOS Hotkey)

STEPS:

1. Scan SET FUNCTION BUTTON
2. Scan 1~16 alphanumerics from Full ASCII table
   (range = 0x00 ~ 0x7F for BT SPP
   = 0x00 ~ 0x7F & Funtion/Navigation/Modifier Keys for BT HID,
   Default = iOS Hotkey)
3. Scan SET FUNCTION BUTTON

. E062$

DEFAULT FUNCTION BUTTON

NOTE:

1. If you would like to reset function button to iOS Hotkey, simply scan Default Function Button.

GROUP-22

POWER OFF TIMEOUT

Variable Timeout

. B030$

SET MINUTE
(DEFAULT = 03 MIN)

. B029$

SET SECOND
(DEFAULT = 00 SEC)

The timeout is 3 minutes & 0 second by default, and is programmable from minimum of 10 seconds (00:10) to maximum of 60 minutes and 60 seconds (60:60)
For example, to set the timeout as 5 minutes 30 seconds:

1. Scan [Set Minute]
2. Scan [0] & [5] on below numeric barcode table.
3. Scan [Set Minute]
4. Scan [Set Second]
5. Scan [3] & [0] on below numeric barcode table.
6. Scan [Set Second]

SET BLUETOOTH DEVICE ID

To customize your own Bluetooth device name for the wireless scanner, please follow below steps:

STEP 1

Default Wireless ID

. B022$

STEP 2

Set Wireless ID

. B023$

STEP 3

Scan up to 16 alphanumeric characters from Full ASCII Table (Group 51-57) as your desired Device ID.

STEP 4

Set Wireless ID

. B023$

STEP 5

Scan a desired BT mode in **BLUETOOTH PROFILE** (Group 18) to complete the configuration.

NOTE:

1. If you have connected the scanner with the host BEFORE customizing your Bluetooth device name, please remove the device and create a new connection to make sure device name is refreshed. For PC, it is recommended to restart the Bluetooth adaptor in order to refresh device name.
2. At Step 3, the scanner will beep three times as an alert that more than 16 characters are entered.
3. To reset the Bluetooth device name to default ("Wireless Scanner"), please simply do Step1 & Step 5, skipping Step 2 to Step 4.

GROUP-24

SET SPP PINCODE

By default, the pincode under SPP profile for the scanner is “1234”. You may customize this pincode with below steps:

STEP 1

. B024$

Set SPP Pincode

STEP 2

Scan numeric barcodes (see **NUMERIC BARCODES** below) Up to 8 numbers can be set as SPP Pincode.

NUMERIC BARCODES

1 6

2 7

3 8

4 9

5 0

STEP 3

. B024$

Set SPP Pincode

STEP 4

Scan a desired BT mode in **BLUETOOTH PROFILE** (Group 21) to complete the configuration.

GROUP-25

SCANLINK (SPP/HID MASTER MODE)

SCANLINK

ScanLink is a connection method that turns the scanner into a master device, which initiates the Bluetooth connection with the target host device (now a slave device). This, as a result, saves user the trouble of going through numerous setup procedures on the host device to establish connection.

There are two types of ScanLink operation:

SCANLINK via Bluetooth HID/SPP Profile

First, please generate one ScanLink barcode for the target slave device in below methods:
1. The barcode must be Code 39 with no checksum
2. Barcode data format: HID(or SPP) + device's MAC address

For example, the target slave device's MAC address is 001583522C3B.

Please encode:
HID001583522C3B in Code39 barcode.
or
SPP001583522C3B in Code39 barcode.

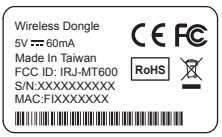
Now, you may establish Bluetooth conneciton with only one scan on the ScanLink barcode.

*Note: Please check the your host device's compatibility before using ScanLink function via either of the profiles.

SCANLINK with Wireless Dongle

Wireless Dongle, authorized or manufactured by our company, usually have a ScanLink barcode on its product label or on its extra Set Connection label. Simply scanning the ScanLink barcode on either one of the labels will create Bluetooth connection.

<Set Connection label>



<Product Label>

GROUP-26

SPP REMOTE CONTROL, SHUT DOWN

SPP REMOTE CONTROL

You may control/interact with scanner using below commands over SPP profile.

Aloha

Host sends:	CR,LF,{,A,L,},CR,LF	(8 bytes)
Scanner replys:	O,K,CR,LF	(4 bytes)

Beep

Host sends:	CR,LF,{,M,1,},CR,LF	(8 bytes)
or Host sends:	CR,LF,{,BEL,},CR,LF	(7 bytes)
Scanner reacts:	Emits a short beep for 80mS	

Vibration

Host sends:	CR,LF,{,B,Z,},CR,LF	(8 bytes)
Scanner reacts:	Vibrates for 200mS	

NOTE:
1. Not supported by MT100A, MT3000LB.

Good Read LED Indication

Host sends:	CR,LF,{,G,L,},CR,LF	(8 bytes)
Scanner reacts:	Turns on good read LED for 200mS	

Start Scanning

Host sends:	CR,LF,{,T,G,},CR,LF	(8 bytes)
Scanner reacts:	Starts scanning (LED Illumination On)	

NOTE:
1. Only applicable for Trigger & Toggle Mode.

Stop Scanning

Host sends:	CR,LF,{,T,S,},CR,LF	(8 bytes)
Scanner reacts:	Stops scanning (LED Illumination Off)	

NOTE:
1. Only applicable for Trigger & Toggle Mode.

SHUT DOWN

This configuration barcode will shut down the scanner immediately but still reserve the pairing record.

. E255$

SHUT DOWN

GROUP-27

BATCH MODE, BINARY CHECK CHARACTER

BATCH MODE

ENABLE

DISABLE

When out of range, the scanner will temporarily keep scanned data in its memory buffer(2K RAM) until the buffer is full. When back in range, the scanner will send all stored data back to the host.

NOTE:
1. Batch Mode will not function when Memory Mode is enabled, or no connection is made beforehand.
2. Not supported by MT1297.

BINARY CHECK CHARACTER

ENABLE

DISABLE

Once enabled, a checksum will be added to the end of each data to conduct Xor calculation. For Bluetooth SPP & USB-VCP, the BCC is 1 byte. For Bluetooth HID, the BCC are 2 bytes.

Example:
The barcode data is “TEST” with terminator <CR><LF>

1. Bluetooth SPP & USB-VCP:
Data Format = <T> + <E> + <S> + <T> + <CR> + <LF> + <BCC>.
BCC = 54h ^ 45h ^ 53h ^ 54h ^ 0Dh ^ 0Ah = 11h

2. Bluetooth HID:
Data Format = <T> + <E> + <S> + <T> + <Enter> + <BCC>
BCC = 54h ^ 45h ^ 53h ^ 54h ^ E7h = F1h

However, since control character cannot be displayed in Bluetooth HID, BCC will be converted into 2 bytes of characters. As a result, the data will be: TEST + <Enter> + F + 1

GROUP-28

MEMORY MODE, DELETE RECORD

MEMORY MODE

. C035$

MEMORY MODE

After scanning the above barcode, the scanner will be able to collect barcode data off-line. The barcode data will be stored in the format of:
< **Date** >, < **Time** >, < **Barcode Data** > < **CR** >

To retrieve stored data, please connect the scanner to the host with cable, access removable storage device "**MiniScan**" from which you may open or copy the file "**BARCODE.txt**" to your computer.

To exit Memory Mode, simply scan any interface barcode in **INTERFACE** (Group 17)

NOTE:
Memory Mode (Group 28-30) is not supported by MT100A.

DELETE LAST RECORD

. R005$

DELETE LAST RECORD

To delete ONE stored data, please scan below barcode or press the function button.

CLEAR ALL RECORD

To delete ALL stored data, simply delete the file "**BARCODE.txt**" in the removable storage device "**MiniScan**" until you hear two beeps.

GROUP-29

DATA FORMAT, DATE & TIME SETUP

DATA FORMAT

. R011$

DATA FORMAT

The default Data Format is <Date>, <Time>, <Barcode Data>
below are items and their setup codes:

Code	Item	Code	Item
2	Date	4	Barcode Data
3	Time		

Example:
To change Data Format to <Barcode Data>, <Date>, <Time>
1. Scan [Data Format]
2. Scan [4], [2], [3] from Full ASCII numeric table (Group 57)
3. Scan [Data Format]

. R010$

FIELD SEPARATOR

Default is comma (,) . You may replace it with any alphanumeric characters from the full ASCII table.

Example: To change Field Separator to Semicolon (;)
1. Scan [Field Separator]
2. Scan [;] from the full ASCII table (Group 51)
3. Scan [Field Separator]

DATE & TIME SETUP

SET DATE

. R006$

Example: To set Date to 2012-08-01 (Year-Month-Day):
1. Scan [Set Date]
2. Scan [1], [2], [0], [8], [0], [1] from Full ASCII numeric table (Group 57)
3. Scan [Set Date]

SET TIME

. R007$

Example: To set Time to 08:10:30 am (Hr:Min:Sec)
1. Scan [Set Time]
2. Scan [0], [8], [1], [0], [3], [0] from Full ASCII numeric table (Group 57)
3. Scan [Set Time]

* To avoid Time and Date being reset to factory default due to running out of battery, please fully charge the scanner for at least 3 hours before use.

GROUP-30

DATE FORMAT, TIME FORMAT

DATE FORMAT

. R008$

DATE FORMAT

The default Date Format is DD/MM/YYYY (Code = 09), below is full list of available formats and their setup codes:

Code	Format	Code	Format
01	DD-MM-YYYY	09	DD/MM/YYYY
02	MM-DD-YYYY	10	MM/DD/YYYY
03	DD-MM-YY	11	DD/MM/YY
04	MM-DD-YY	12	MM/DD/YY
05	YYYY-MM-DD	13	YYYY/MM/DD
06	YY-MM-DD	14	YY/MM/DD
07	DD-MM	15	DD/MM
08	MM-DD	16	MM/DD

Example:
To set Date Format to MM/DD/YY (Code =12)
1. Scan [Date Format]
2. Scan [1], [2] from Full ASCII numeric table (Group 57)
3. Scan [Date Format]

TIME FORMAT

TIME FORMAT

. R009$

The default Time Format is HH:MM:SS (Code = 01), below are available formats and their setup codes:

Code	Format	Code	Format
01	HH:MM:SS	02	HH:MM

Example:
To set Time Format to HH:MM (Code = 02)
1. Scan [Time Format]
2. Scan [0], [2] from Full ASCII numeric table (Group 57)
3. Scan [Time Format]

ON

OFF

SET INSERT DATA*

INSERT DATA- ON

INSERT DATA- OFF

The data can be any alphanumerics of FULL ASCII Table (GROUP 51-57)

NOTE:
ABC-CODABAR (American Blood Commission). The ABC Code is an acronym for American Blood Commission. This bar code is a variant of the CODABAR Code developed for the use in the blood bank. This Code consists of two bar codes which are decoded in one read cycle. The code is concatenated when the stop character of the first bar code and the start character of the second bar code is a " D ", these two " D " are not transmitted.

CX CODE- CODABAR

ON

OFF

SET INSERT DATA*

INSERT DATA- ON

INSERT DATA- OFF

The data can be any alphanumerics of FULL ASCII Table (GROUP 51-57)

NOTE:
The CX-Code consists of two bar codes which are decoded in one read cycle, the code is concatenated when the stop character of the first bar code is a C, and the start character of the second bar code is a B. The B and C characters are not transmitted.

ON

.I020$

OFF

.I021$

SET INSERT DATA*

CODABAR COUPLING

.I041$

INSERT DATA - ON

.I026$

INSERT DATA- OFF

ABC-Codabar and CX-Codabar have certain rules regarding the Stop Character of first bar code and the stop character of second bar code while in conjunction, while Codabar-Coupling is enabled, the data from any two Codabar bar codes can be coupled into one set of data without any limitations between the Stop character of first bar code and the Start character of second bar code. The Start and Stop characters associated with each bar code will be sent.

* *The data can be any alphanumerics of FULL ASCII Table (GROUP 51-57)*

ADJACENT REQUIRED

If CODABAR ADJACENT is enabled, the scanner will only read two adjacent Codabar bar codes; a single barcode will not be read.

.I033$

ON

.I034$

OFF

NOTE:

1. Both ABC-Codabar and CX-Codabar can be enabled together, except when Codabar-Coupling is also enabled.
2. If ABC-Codabar, CX-Codabar, and Codabar-Coupling are all enabled at the same time, the scanner will read only Codabar-Coupling, that is, ABC-Codabar, CX-Codabar will be considered coupling formats.

STEPS:

1. Scan SET INSERT DATA.
2. Scan any combination of alphanumeric characters from FULL ASCII Table.
3. Scan SET INSERT DATA.

NOTE:

1. The scanner will beep three times as indication that a setting is not yet complete or unexpected barcode is scanned during multi-step configuration.
2. If you make a mistake, forget a step, etc., and want to abort the multi-step configuration, scan RESET/ABORT and start over again.
