Chapter 1 Introduction

This user's manual is dedicated to MT582, a wearable 2D wireless ring scanner that enables hands-free scanning for mobile operators who work with smartphones or other mobile devices of iOS and Android platform. With built-in Bluetooth 5.0 technology and disinfectant-ready housing, MT582 provides 20-meter wireless data transmission and microbe-free scanning experience.

Specifications

Optic & Performance	
Light Source	White LED Visible red LED
Sensor	640 x 480
Resolution	4mil/ 0.01mm (1D), 10mil/ 0.25mm (2D)
Scan Angle	Horizontal 43° Vertical 23°
Pitch Angle	±55°
Skew Angle	±55°
Roll Angle	360°
Print Contrast Ratio	10%
Width of Field	141mm (13Mil Code39)
NFC Pairing	Supported
Memory	2MB (20,000 barcodes)

Typical D.O.F (Environment: 800 lux)	5 Mil Code 39 : 39 ~ 198mm
	13 Mil UPC/EAN : 52 ~ 355mm
	15 Mil QR Code : 30 ~ 250mm
	6.67 Mil PDF417 : 41 ~ 165mm
	10 Mil Data Matrix: 35 ~ 163mm
Physical Characteristics	
Dimension	W27.6 x L46.2 x H26.8 mm
Weight	19.4g
Color	Black (MT582) White (MT582M)
Material	PC+ABS
Cable	Type C(M) to USB A(M) Cable, 1.5M
Trigger	Touch Switches (Trigger Buttons) Function/Power Button
Indicator	LED, Buzzer
Electrical	
Operation Voltage	3.7 VDC \pm 5%
Working Current	< 210mA
Standby Current	< 25mA
Battery	3.7V, 240mAh, Li-Polymer Battery
Number of Scan (per full charge)	4000 scans (1 scan/ 5 secs, Bluetooth connected)
Connectivity	
Radio	Bluetooth 5.0 dual mode (Class 2)
Range	66 ft/ 20m (line of sight)
Interface/ Profile	BT HID BT SPP USB HID USB VCP Memory
User Environment	
Operating Temperature	-10 ~ 50°C
Storage Temperature	-20 ~ 60°C
Humidity	0% ~ 95%RH (Non-condensing)
Drop Durability	1.5M
Sealing	IP42
Ambient Light	100,000 Lux (Sunlight)
1D Symbolologies	Code 128, EAN-13, EAN8-, UPC-E, UPC-A, ISBN, ISSN, Code 11, Interleaved 2 of 5, Code 39, Code 93, Code 32, Codabar,

	Matrix 2 of 5, Industrial 2 of 5, Standard 2 of 5, Plessey, MSI Plessey, GS1 Databar, Febraban, Composite
2D Symbologies	QR Code, Micro QR Code, PDF417, MicroPDF417, Data Matrix, Aztec, MaxiCode, HanXin, Dotcode
Regulatory	
ESD	Functional after 4KV contact, 8KV air discharge
EMC/RF	TELEC
Safety Approval	EN/IEC62471 (Exempt Group)
Environmental	WEEE, RoHS 2.0
Medical Compliance (MT582M only)	JIS Z 2801

Beeper Indication

Beeper	Status
Single beep	Good read
Single short beep	The scanner reads a Code39 ASCII during multi-step configuration
Two beeps	Wireless connection
	The scanner successfully reads a configuration barcode
Three beeps	Wireless disconnection
Three short beeps	The scanner reads a barcode while disconnected
	The scanner reads an unexpected barcode during multi-step configuration. (Please scan " Abort " and start over)
	Memory Full
Four beeps (Hi-Lo-Hi-Lo)	Out of range / Poor connection
Five beeps	Low power

LED Indication

LED	Status
Off	Power off / Standby / Connected
Flashing blue	Disconnected / Discoverable
One green flash	Good read
Flashing red	Low power
Solid red	Charging

Chapter 2 General Settings

Barcode Configurability (Setup Code)

Scanning below configuration barcodes will allow/prohibit user to change settings by scanning configuration barcodes in this manual.

.B015\$

Enable Barcode Configurability*

.B016\$

Disable Barcode Configurability

Factory Default

Scanning below configuration barcode will reset all parameters to factory default settings (the ones with * asterisk mark)

.A001\$

Factory Default

Check Version

To check firmware version, please scan below configuration barcode.

.A007\$

Check Version

Button Preference

Scan one of below barcodes to determine which touch-sensing button to enable according to your habit:

.F064\$

Right Button Only
(For Left-handed User)

.F065\$

Left Button Only *
(For Right-handed User)

.F066\$

Both Button

Good Read Indicator

Beep Tone

.F012\$

Off

.F022\$

Beep Low (2.0KHz)

.F018\$

Beep Medium (2.7KHz)

.F019\$

Beep High (4.0KHz)*

Beep Mode

.F023\$

Normal*

.F024\$

Warning Beep Only

.F025\$

Mute

Data Format

UTF-8 to Unicode Conversion

.C044\$

Disable UTF-8 to Unicode*

.C045\$

Enable UTF-8 to Unicode
(Word)

Country Code Page

.C070\$

West European Latin*

.C054\$

**Japanese, Shift-JIS
(Notepad / Excel)**

.C055\$

**Japanese, Shift-JIS
(Word)**

Note: Code pages define the mapping of character codes to characters. To display the proper characters for the barcode being scanned, please select the appropriate code page. For Shift-JIS to output properly, please make sure to disable UTF-8 to Unicode Conversion.

HT/CR/ESC Converts to TAB/ENTER/ESCAPE

.D026\$

Off*

.D025\$

On

Note:

1. By default, HT [\$I], CR [\$M] and ESC [%A] is transmitted as <0x09>, <0x0D> and <0x1B> respectively.
2. When enabled, HT [\$I], CR [\$M] and ESC [%A] is transmitted as <TAB>, <ENTER> and <ESCAPE> on keyboard respectively.

Function Code Conversion

.C020\$

Off

.C019\$

On*

Note:

Once disabled, the scanner will output the original encoded data of the barcodes in Appendix - Function/Navigation/Modifier Keys.

Control Code Output Method

.D028\$

Ctrl Mode*

.D029\$

Alt Mode

.D027\$

Disable Output

Note:

Control code (0x01 ~ 0x1F) can be sent by two methods:

(1) Ctrl Mode:

A barcode of "A<HT>F" (0x41/0x09/0x46) is scanned, the output sequence is:

- a. Enter "A" – Press A key
- b. Enter "Ctrl + I" – Since 0x09 corresponds to "Ctrl + I", virtual keyboard will press and hold Ctrl key, press I key, and release Ctrl key and I key
- c. Enter "F" – Press F key

Since "Ctrl+I" is shortcut for italicizing text in some software applications, the result of above output sequence can be a regular A plus an italic F.

(2) Alt Mode:

For <HT>, the output sequence of virtual keyboard is:

Enter "Alt + 0 + 0 + 0 + 9" – Virtual keyboard will press and hold Alt key, press "0", "0", "0" and "9" on numeric keypad respectively, and release Alt key.

Control Code Table

ASCII	Hex	Dec	Ctrl Mode	Alt Mode
NUL	00	0	Ctrl+Shift+2	Alt+0+0+0+0
SOH	01	1	Ctrl+a	Alt+0+0+0+1
STX	02	2	Ctrl+b	Alt+0+0+0+2
ETX	03	3	Ctrl+c	Alt+0+0+0+3
EOT	04	4	Ctrl+d	Alt+0+0+0+4
ENQ	05	5	Ctrl+e	Alt+0+0+0+5
ACK	06	6	Ctrl+f	Alt+0+0+0+6
BEL	07	7	Ctrl+g	Alt+0+0+0+7
BS	08	8	Ctrl+h	Alt+0+0+0+8
HT	09	9	Ctrl+i	Alt+0+0+0+9
LF	0A	10	Ctrl+j	Alt+0+0+1+0
VT	0B	11	Ctrl+k	Alt+0+0+1+1
FF	0C	12	Ctrl+l	Alt+0+0+1+2
CR	0D	13	Ctrl+m	Alt+0+0+1+3
SO	0E	14	Ctrl+n	Alt+0+0+1+4
SI	0F	15	Ctrl+o	Alt+0+0+1+5
DLE	10	16	Ctrl+p	Alt+0+0+1+6
DC1	11	17	Ctrl+q	Alt+0+0+1+7
DC2	12	18	Ctrl+r	Alt+0+0+1+8
DC3	13	19	Ctrl+s	Alt+0+0+1+9
DC4	14	20	Ctrl+t	Alt+0+0+2+0
NAK	15	21	Ctrl+u	Alt+0+0+2+1
SYN	16	22	Ctrl+v	Alt+0+0+2+2
ETB	17	23	Ctrl+w	Alt+0+0+2+3
CAN	18	24	Ctrl+x	Alt+0+0+2+4
EM	19	25	Ctrl+y	Alt+0+0+2+5
SUB	1A	26	Ctrl+z	Alt+0+0+2+6
ESC	1B	27	Ctrl+[Alt+0+0+2+7
FS	1C	28	Ctrl+\	Alt+0+0+2+8
GS	1D	29	Ctrl+]	Alt+0+0+2+9
RS	1E	30	Ctrl+Shift+6	Alt+0+0+3+0
US	1F	31	Ctrl+Shift+-	Alt+0+0+3+1

Numeric Key

.D017\$

Numeric Key

.D018\$

Alphanumeric Key*

Note:

1. By default, the alphanumeric key is used for transmitting digits. Scan NUMERIC KEY if you want to use the keys on the numeric keypad.
2. If you select NUMERIC KEY, the Num Lock status of the physical keyboard should be ON.

Auto Num Lock

.C058\$

Auto Num Lock Off

.C059\$

Auto Num Lock On*

Note:

When enabled, the scanner will automatically turn on Num Lock when in Alt Mode/Code Page/UTF-8 to Unicode output, if Num Lock is currently disabled.

Capital Lock Mode

.A005\$

Capslock Off*

.A004\$

Capslock On

.A006\$

Capslock Free

Note:

When barcode scanner is set to Capslock Free mode, no matter keyboard Capslock LED indicator is ON or OFF, output will be always the same as the Original barcode. In other words, what you see is what output is.

Surround GS1 Application Identifiers (AI's) with Parentheses

.J016\$

Not Surround AI's with Parentheses*

.J015\$

Surround AI's with Parentheses

When enabled, all GS1 AI in barcode(GS1-128, GS1-DataMatrix, UDI...) will be surrounded with parentheses.

Imaging Settings

1D Inverse Barcode

.D021\$

Disable 1D Inverse Barcode*

.D022\$

Enable 1D Inverse Barcode

2D Inverse Barcode

.D054\$

Disable 2D Inverse Barcode*

.D055\$

Enable 2D Inverse Barcode

Chapter 3 Interface

BT HID

Getting Connected

1. Press the function button on the top to power up the scanner.
2. Scan "**Disconnect**", the scanner will emit two beeps.

.E031\$

Disconnect

3. Scan "**BT HID**", the scanner will emit two beeps.

.E043\$

BT HID

4. Select "Wireless Scanner" from discovered device list.
5. The scanner will emit two beeps as indication that the Bluetooth connection has established successfully.
6. While conneted with the scanner as physical keyboard, the touch keyboard on iOS/Android device might disappear. To resolve this issue please do the following:
 - (1) For iOS device, simply press the function button on the top once.
 - (2) For Android device, go to "Settings" > "Language & Input", tap on "Default keyboard" and turn off "Physical keyboard" or turn on "On-screen keyboard".

BT SPP

Getting Connected

1. Press the function button on the top to power up the scanner.
2. Scan "**Disconnect**", the scanner will emit two beeps.

.E031\$

Disconnect

3. Scan "**BT SPP**", the scanner will emit two beeps..

.E042\$

BT SPP

4. Select "Wireless Scanner" from discovered device list.
5. Enter serial communication software on your host and open the port occupied by the scanner.
6. The scanner will emit two beeps as indication that the Bluetooth connection has established successfully.

Set SPP Pincode

By default, the pincode under BT SPP profile for the scanner is "1234". It is configurable up to 8 numbers.

.B024\$

Set SPP Pincode

Example: Set SPP Pincode to 0000.

Step1: Scan "**Set SPP Pincode**"

Step2: Scan "**0**" "**0**" "**0**" "**0**" in Appendix - Numbers

Step3: Scan "**Set SPP Pincode**"

General Bluetooth Settings

Power Off Timeout

The power off timeout is 3 minutes & 0 second by default. They are configurable from a minimum of 10 seconds (00:10) to a maximum of 60 minutes and 59 seconds (60:59)

.B030\$

Set Minute
(Default = 03)

.B029\$

Set Second
(Default = 00)

Example: Set Power Off Timeout to 5 minutes and 30 seconds.

Step1: Scan "Set Minute"

Step2: Scan "0" "5" in Appendix - Numbers

Step3: Scan "Set Minute"

Step4: Scan "Set Second"

Step5: Scan "3" "0" in Appendix - Numbers

Step6: Scan "Set Second"

To disable Power Off Timeout (make scanner always on), scan below barcode:

.B021\$

Disable Timeout

Shut Down

To shut down the scanner immediately, please scan below configuration barcode.

.E255\$

Shut Down

iOS Touch Keyboard

To toggle iOS touch keyboard, please scan below configuration barcode.

Toggle iOS Touch Keyboard

Alternatively, you may simply press the function button.

Set Bluetooth Device ID

Bluetooth device name is configurable up to 16 alphanumeric characters:

Set Bluetooth Device ID

Example: Set XYZ123 as Bluetooth Device ID

Step 1: Scan "Set Bluetooth Device ID"

Step 2: Scan "X" "Y" "Z" "1" "2" "3" in Appendix - Upper Case Alphabets & Numbers

Step 3: Scan "Set Bluetooth Device ID"

To reset Bluetooth Device ID to "Wireless Scanner", scan below barcode:

Reset Bluetooth Device ID

To add the last 6 digits of MAC address to Bluetooth Device ID ("Wireless-xxxxxx"), scan below barcode:

Add MAC Address to Bluetooth Device ID

Check Bluetooth Firmware Version

To check scanner's Bluetooth firmware version, please connect to a host device via BT HID or BT SPP and scan below configuration barcode.

Check Bluetooth Firmware Version

Check Device MAC Address

To check scanner's MAC address, please connect to a host device via BT HID or BT SPP and scan below configuration barcode.

Check Device MAC Address

Check Host MAC Address

To check scanner's MAC address, please connect to a host device and scan below configuration barcode.

Check Host MAC Address

Check Battery Life

To check scanner's battery life, please connect to a host device and scan below configuration barcode.

Check Battery Life

ScanLink

ScanLink is a connection method that turns the scanner into a master device, which initiates the Bluetooth connection with the target host device (now a slave device). This, as a result, saves user the trouble of going through numerous setup procedures on the host device to establish connection.

Simply generate ScanLink barcode for the target slave device in below rule:

For BT HID profile, please encode:

HID<MAC Address> in Code39 without checksum or QR Code.

For BT SPP profile, please encode:

SPP<MAC Address> in Code39 without checksum or QR Code.

Example: Target Slave Device MAC Address = 00:15:83:52:2C:3B, Profile = BT HID

Encode **HID001583522C3B** in Code39 without checksum or QR Code.

NFC Pairing

The scanner can be paired with NFC-compatible Android device with just a tap. Please follow below steps:

1. Enable NFC and Bluetooth on the Android device, and make sure the screen is unlocked and turned on.
2. Press the function button on the top to power up the scanner.
3. Scan "**Disconnect**", the scanner will emit two beeps.

4. Scan "**BT HID**", the scanner will emit two beeps.

5. Tap the NFC area on the Android device against the NFC area (the logo area) at the top of the scanner.

6. A Bluetooth pairing request dialog will pop up (sometimes in the drop-down notification). Please tap "Pair".
7. The scanner will emit two beeps as indication that the Bluetooth connection has established successfully.

Memory Mode

.C035\$

Memory Mode

After scanning the above barcode, the scanner will be able to collect barcode data off-line. The barcode data will be stored in the format of:

<Date>, <Time>, <Barcode Data> <CR>

To retrieve stored data, please connect the scanner to the host with USB cable, access removable storage device "**MiniScan**" from which you may open or copy the file "**BARCODE.txt**" to your computer.

To exit Memory Mode, simply scan any interface barcode (e.g. "**BT HID**", "**BT SPP**", "**USB HID**", "**USB VCP**") other than memory mode.

Delete Last Record

To delete last memory data, please scan below barcode or press function button once when the scanner is in memory mode.

.R005\$

Delete Last Record

Clear All Record

To delete all memory data, please connect the scanner to the host with USB cable, access removable storage device "**MiniScan**", and delete the file "**BARCODE.txt**". The scanner will emit two beeps as indication that the file has been successfully deleted.

Data Format

The default Data Format in memory mode is <Date>, <Time>, <Barcode Data>.

Data Format

Below are configurable items and their setup codes:

Code	Item
2	Date
3	Time
4	Barcode Data

Example: Set Data Format as <Barcode Data>, <Date>, <Time>

Step1: Scan “**Data Format**”

Step2: Scan “**4**” “**3**” “**2**” respectively in Appendix - Numbers

Step3: Scan “**Data Format**”

Field Separator

The field separator in memory mode is comma (,) by default. It can be replaced by any alphanumeric characters.

Field Separator

Example: Set Field Separator as Semicolon (;)

Step1: Scan “**Field Separator**”

Step2: Scan “ ; ” in Appendix - Symbols

Step3: Scan “**Field Separator**”

Date Format

The default Date Format is **DD/MM/YYYY** (Code = 09)

Date Format

Below are available Date Format and their setup codes:

Code	Date Format	Code	Date Format
01	DD-MM-YYYY	09	DD/MM/YYYY
02	MM-DD-YYYY	10	MM/DD/YYYY
03	DD-MM-YY	11	DD/MM/YY
04	MM-DD-YY	12	MM/DD/YY
05	YYYY-MM-DD	13	YYYY/MM/DD
06	YY-MM-DD	14	YY/MM/DD
07	DD-MM	15	DD/MM
08	MM-DD	16	MM/DD

Example: Set Date Format as MM/DD/YY (Code = 12)

Step1: Scan "Date Format"

Step2: Scan "1" "2" respectively in Appendix - Numbers

Step3: Scan "Date Format"

Time Format

The default Time Format is HH:MM:SS (Code = 01)

Time Format

Below are available Time Format and their setup codes:

Code	Time Format
01	HH:MM:SS
02	HH:MM

Example: Set Time Format as HH:MM (Code = 02)

Step1: Scan "Time Format"

Step2: Scan "0" "2" respectively in Appendix – Numbers

Step3: Scan "Time Format"

Date & Time Setup

.R006\$

Set Date

.R007\$

Set Time

Example: Set date as 2022-07-27, set time as 08:10:30 am (HH:MM:SS)

Step1: Scan "Set Date"

Step2: Scan "2" "2" "0" "7" "2" "7" in Appendix - Numbers

Step3: Scan "Set Date"

Step4: Scan "Set Time"

Step5: Scan "0" "8" "1" "0" "3" "0" in Appendix - Numbers

Step6: Scan "Set Time"

USB HID

Scanning below configuration barcode will configure the scanner to USB HID interface, in which the scanner becomes an HID keyboard device.

Intercharacter Delay

The configurable range is from 0 to 255ms. The larger the number, the longer the delay.

.B009\$

Set Intercharacter Delay

(Default = 4ms)

Example: Set Intercharacter Delay to 8ms

Step1: Scan Set Intercharacter Delay

Step2: Scan "0" "0" "8" in Appendix - Numbers

Step3: Scan Set Intercharacter Delay

Interblock Delay

The configurable range is from 0 to 2550ms. The larger the number, the longer the delay.

.B007\$

Set Interblock Delay

(Default = 0ms)

Example: Set Interblock Delay to 20ms

Step1: Scan Set Interblock Delay

Step2: Scan "0" "0" "2" in Appendix - Numbers

Step3: Scan Set Interblock Delay

USB VCP

Scanning below configuration barcode will configure the scanner to USB VCP interface. The scanner will be able communicate with the host via USB Virtual COM. Normally virtual COM port can be recognized by the host. If it is not recognizable by the host, please download VCP driver from our website.

.C006\$

USB VCP

BCC (Binary Check Character)

.E029\$

On

.E030\$

Off*

Note:

Once enabled, a checksum will be added to the end of each data to conduct Xor calculation. For Bluetooth SPP & USB VCP, the BCC is 1 byte. For Bluetooth HID & USB HID, the BCC are 2 bytes.

Example:

The barcode data is "TEST" with terminator <CR><LF>

1. BT SPP & USB VCP:

Data Format = <T> + <E> + <S> + <T> + <CR> + <LF> + <BCC>.

BCC = 54h ^ 45h ^ 53h ^ 54h ^ 0Dh ^ 0Ah = 11h

2. BT HID & USB HID:

Data Format = <T> + <E> + <S> + <T> + <Enter> + <BCC>

BCC = 54h ^ 45h ^ 53h ^ 54h ^ E7h = F1h

However, since control character cannot be displayed in Bluetooth HID and USB HID, BCC will be converted into 2 bytes of characters.

As a result, the data will be: TEST + <Enter> + F + 1

Chapter 4 Reading Mode

Trigger Mode

In Trigger Mode the LED will stay on once trigger is pressed and held, and will turn off automatically once a barcode is read or LED Auto-Off timeout expires.

Trigger Mode*

Toggle Mode

In Toggle Mode the LED will stay on once trigger is pressed, and will turn off automatically once a barcode is read or LED Auto-Off Timeout expires.

Toggle Mode

Continuous Mode

In Continuous Mode the LED will stay on until LED Auto-Off timeout expires and then immediately turn on again.

Continuous Mode

Batch Mode

In Batch Mode the LED will stay on when trigger is pressed and held, during which the scanner will read each unique barcode once. It cannot be read again until the next cycle.

Auto-sensing Mode

In Auto-sensing Mode the LED will turn off automatically after LED Auto-Off timeout expires. Any change detected in image will make LED turn on again.

Trigger / Toggle / Auto-sensing Mode – LED Auto-Off Timeout

The configurable range is 0.1 ~ 125 sec. 3 digits must be programmed during the multi-step configuration. (001 = 0.1 sec, 002 = 0.2 sec, 003 = 0.3 sec, 004 = 0.4 sec, 005 = 0.5 sec, 0.6 = 1 sec, 007 = 1.5 sec, 008 = 2.0 sec, 009 = 2.5 sec, 010 = 3 sec, 254 = 125 sec, 255 = unlimited)

Example: Set LED Auto-Off Timeout as 3 sec

Step1: Scan "LED Auto-Off Timeout"

Step2: Scan "0" "1" "0" in Appendix - Numbers

Step3: Scan "LED Auto-Off Timeout"

Continuous Mode / Auto-sensing Mode – Identical Read Interval

A barcode (or an identical one) can be re-scanned only after the defined amount of Identical Read Interval expires.

The configurable range is 1 ~ 125 sec. 3 digits must be programmed during the multi-step configuration. (006 = 1 sec, 007 = 1.5 sec, 008 = 2.0 sec, 009 = 2.5 sec, 010 = 3 sec, 254 = 125 sec, 255 = unlimited)

Identical Read Interval

(Default = 1 sec)

Example: Set Identical Read Interval as 5 sec

Step1: Scan "Identical Read Interval"

Step2: Scan "0" "1" "4" in Appendix - Numbers

Step3: Scan "Identical Read Interval"

Chapter 5 Data Format

By default data format is as follows:

<Preamble> <Code ID> <Barcode Length> <Barcode Data> <Postamble> <Terminator>
