Chapter 1 System Settings

Scan Mode

Level Trigger Mode:

A trigger pull activates a decode session. The decode session continues until a barcode is decoded or you release the trigger.

Sense Mode (Image Change):

The engine activates a decode session every time it detects a barcode presented to it. The decode session continues until a barcode is decoded or the decode session timeout expires.

Enter Programming Mode

Level Trigger Mode **

Sense Mode (Image Change)

Exit Programming Mode

Enter Programming Mode

Sense Mode (Image Change) Sensitivity

This parameter sets the sensitivity of image change trigger. You can select an appropriate level of sensitivity that fits your application environment. This feature is only applicable to the Sense mode.

Low Sensitivity

Medium Sensitivity **

High Sensitivity

Exit Programming Mode

Enter Programming Mode

Aiming

Trigger: The scanner projects an aiming pattern only during image decoding.

Always On: Aiming pattern is constantly on after the scanner is powered on.

Off: Aiming pattern is off all the time.

Always On

Trigger **

Off

Exit Programming Mode

Enter Programming Mode

Good Read Beep

Scanning the **Off** barcode can turn off the beep that indicates successful decode; scanning the **On** barcode can turn it on.

On **

Off

Exit Programming Mode

Enter Programming Mode

Good Read Beep Frequency

Extra Low - 800 Hz

Low - 1600 Hz

Medium - 2730 Hz **

High - 4200 Hz

Exit Programming Mode

Decode Settings

Enter Programming Mode

Decode Area

Whole Area Decoding: The scanner attempts to decode barcode(s) within its field of view, from the center to the periphery, and transmits the barcode that has been first decoded.

Aiming Bar Code Decoding: The scanner only decodes the barcode aimed squarely by the aiming pattern. For those using a crosshair aiming pattern, only the barcode aimed by the center of crosshair will be decoded.

Whole Area Decoding **

Aiming Bar Code Decoding

Exit Programming Mode

Enter Programming Mode

Decode Redundancy

Disable: All code types just read one time.

2 Times: All code types must be successfully read two times before being decoded.

3 Times: All code types must be successfully read three times before being decoded.

Disable **

2 Times

3 Times

Exit Programming Mode

Enter Programming Mode

Decoding Timeout

This parameter sets the maximum time decode session continues during a scan attempt. It is programmable in 1ms increments from 1 ms to 3,600,000ms. When it is set to 0, the timeout is infinite. The default setting is 3,000ms.

Example: Set the decoding timeout to 1,000 ms:

1. Scan the [Enter Programming Mode](#) barcode
2. Scan the [Decoding Timeout](#) barcode
3. Scan the numeric barcodes "1" barcode from Numeric Bar Codes in Appendix A.
4. Scan the numeric barcodes "0" barcode from Numeric Bar Codes in Appendix A.
5. Scan the numeric barcodes "0" barcode from Numeric Bar Codes in Appendix A.
6. Scan the numeric barcodes "0" barcode from Numeric Bar Codes in Appendix A.
Scan the [Exit Programming Mode](#) barcode

Decoding Timeout (ms)

Chapter 2 Interface

Enter Programming Mode

USB HID Keyboard

The transmission will be simulated as USB keyboard input. The Host receives keystrokes on the virtual keyboard. It works on a Plug and Play basis and no driver is required.

USB HID Keyboard **

Exit Programming Mode

Enter Programming Mode

HID Function Key Mapping

ASCII values under 32 are normally sent as control-key sequences. When this parameter is enabled, the keys in bold are sent in place of the standard key mapping (see Appendix C).

Control-Key Mode:

Control Characters (0x00 - 0x1F) are sent as control-key sequences.

Alt + Unicode Mode:

Control Characters (0x00 - 0x1F) are sent as unicode code sequences

Disable

Control-Key Mode**

AIM ID

AIM (Automatic Identification Manufacturers) ID defines symbology identifier (For the details, see the “AIM ID Table” section in Appendix). If AIM ID prefix is enabled, the scanner will add the symbology identifier before the scanned data after decoding.

Disable AIM ID**

Enable AIM ID

Enable OEM ID

Exit Programming Mode

Prefix

Prefix for All Symbologies

If **Prefix for All Symbologies** is enabled, you are allowed to append to the data a user-defined prefix for all symbologies.

Example: Set Prefix "ABCD" for all symbologies

1. Scan the **Enter Programming Mode** barcode
2. Scan the **Set Prefix for All Symbologies** barcode
3. Scan the ASCII barcodes "A" barcode from ASCII Bar Codes in Appendix D
4. Scan the ASCII barcodes "B" barcode from Numeric Bar Codes in Appendix D
5. Scan the ASCII barcodes "C" barcode from Numeric Bar Codes in Appendix D
6. Scan the ASCII barcodes "D" barcode from Numeric Bar Codes in Appendix D
7. Scan the **Exit Programming Mode** barcode

Example: Disable Prefix for all symbologies

1. Scan the **Enter Programming Mode** barcode
2. Scan the **Disable Prefix for All Symbologies** barcode
3. Scan the **Exit Programming Mode** barcode

Enter Programming Mode

Disable Prefix for All Symbologies **

Set Prefix for All Symbologies

Exit Programming Mode

Symbology Prefix

If **Symbology Prefix** is enabled, you are allowed to append to the data a user-defined prefix for a specific symbology .

Example: Set Prefix "80" for QR

1. Scan the **Enter Programming Mode** barcode
2. Scan the **Set Symbology Prefix** barcode
3. Scan the **QR** barcode from Symbologies Bar Codes in Appendix B
4. Scan the numeric barcodes "8" barcode from Numeric Bar Codes in Appendix A
5. Scan the numeric barcodes "0" barcode from Numeric Bar Codes in Appendix A
6. Scan the **Exit Programming Mode** barcode

Example: Disable Prefix for QR

1. Scan the **Enter Programming Mode** barcode
2. Scan the **Disable Symbology Prefix** barcode
3. Scan the **QR** barcode from Symbologies Bar Codes in Appendix B.
4. Scan the **Exit Programming Mode** barcode

Enter Programming Mode

Disable Symbology Prefix

Set Symbology Prefix

Exit Programming Mode

Suffix

Suffix for All Symbologies

If **Suffix for All Symbologies** is enabled, you are allowed to append to the data a user-defined suffix for all symbologies.

Example: Set Suffix "XYZ" for all symbologies

1. Scan the **Enter Programming Mode** barcode
2. Scan the **Set Suffix for All Symbologies** barcode
3. Scan the ASCII barcodes "X" barcode from ASCII Bar Codes in Appendix C
4. Scan the ASCII barcodes "Y" barcode from Numeric Bar Codes in Appendix C
5. Scan the ASCII barcodes "Z" barcode from Numeric Bar Codes in Appendix C
6. Scan the **Exit Programming Mode** barcode

Example: Disable Suffix for all symbologies

1. Scan the **Enter Programming Mode** barcode
2. Scan the **Disable Suffix for All Symbologies** barcode
3. Scan the **Exit Programming Mode** barcode

Enter Programming Mode

Disable Suffix for All Symbologies **

Set Suffix for All Symbologies

Exit Programming Mode

Symbology Suffix

If **Symbology Suffix** is enabled, you are allowed to append to the data a user-defined suffix for a specific symbology .

Example: Set Suffix "@1" for QR

1. Scan the **Enter Programming Mode** barcode
2. Scan the **Set Symbology Suffix** barcode
3. Scan the **QR** barcode from Symbologies Bar Codes in Appendix B
4. Scan the ASCII barcodes **"@"** barcode from ASCII Bar Codes in Appendix C
5. Scan the numeric barcodes **"1"** barcode from Numeric Bar Codes in Appendix A
6. Scan the **Exit Programming Mode** barcode

Example: Disable Suffix for QR

Scan the **Enter Programming Mode** barcode

Scan the **Disable Symbology Suffix** barcode

Scan the **QR** barcode from Symbologies Bar Codes in Appendix B

Scan the **Exit Programming Mode** barcode

Enter Programming Mode

Disable Symbology Suffix

Set Symbology Suffix

Exit Programming Mode

Enter Programming Mode

Terminating Character

A terminating character such as carriage return (CR) or carriage return/line feed pair (CRLF) can only be used to mark the end of data.

None

Set Terminating Character to CR
(0x0D) **

Set Terminating Character to CR LF
(0x0D,0x0A)

Set Terminating Character to TAB
(0x09)

Exit Programming Mode

Chapter 5 Data Editing

Enter Programming Mode

Caps Lock

The **Caps Lock On** options can invert upper and lower case characters contained in barcode data.

Disable Caps Lock **

Enable Caps Lock

Exit Programming Mode

Enter Programming Mode

Case Conversion

Scan the appropriate barcode below to convert all bar code data to your desired case.

No Case Conversion **

Upper Case

Lower Case

Exit Programming Mode

Convert GS Code to Other ASCII Code

Example: Convert GS to #

1. Scan the **Enter Programming Mode** barcode
2. Scan the **Set GS (0x1D) to Other ASCII Code** barcode
3. Scan the ASCII barcodes **#** barcode from ASCII Bar Codes in Appendix C
4. Scan the **Exit Programming Mode** barcode

Example: Disable GS Conversion

Scan the **Enter Programming Mode** barcode

Scan the **Disable GS Code Conversion** barcode

Scan the **Exit Programming Mode** barcode

Enter Programming Mode

Disable GS Code Conversion **

Set GS (0x1D) to Other ASCII Code

Exit Programming Mode

Truncate Data

Truncate Leading Data

This parameter sets the number of leading data to be truncated. It is programmable in 1 increment from 1 to 20 characters. The default setting is 0.

Example: Truncate 8 characters of leading data

Scan the [Enter Programming Mode](#) barcode

Scan the [Truncate Leading Data](#) barcode

Scan the numeric barcodes "8" barcode from Numeric Bar Codes in Appendix

Scan the [Exit Programming Mode](#) barcode

Example: Disable Truncate Leading Data

Scan the [Enter Programming Mode](#) barcode

Scan the [Disable Truncate Leading Data](#) barcode

Scan the [Exit Programming Mode](#) barcode

Enter Programming Mode

Disable Truncate Leading Data **

Truncate Leading Data

Exit Programming Mode

Truncate Ending Data

This parameter sets the number of ending data to be truncated. It is programmable in 1 increment from 1 to 20 characters. The default setting is 0.

Example: Truncate 2 characters of ending data

Scan the [Enter Programming Mode](#) barcode

Scan the [Truncate Ending Data](#) barcode

Scan the numeric barcodes "2" barcode from Numeric Bar Codes in Appendix

Scan the [Exit Programming Mode](#) barcode

Example: Disable Truncate Ending Data

Scan the [Enter Programming Mode](#) barcode

Scan the [Disable Truncate Ending Data](#) barcode

Scan the [Exit Programming Mode](#) barcode

Enter Programming Mode

Disable Truncate Ending Data **

Truncate Ending Data

Exit Programming Mode

Chapter 6 Default Settings

Enter Programming Mode

Factory Defaults

Scan the **Set Factory Defaults** barcode below to set the scanner to factory default values

Set Factory Defaults

Exit Programming Mode

Enter Programming Mode

Custom Defaults

Write to Custom Defaults

Custom default parameters can be configured to set unique default values for all parameters. After changing all parameters to the desired default values, scan the **Write to Custom Defaults** barcode below to configure custom defaults.

Restore Custom Defaults

If custom default values were configured (see **Write to Custom Defaults**), the custom default values are set for all parameters each time the **Restore Defaults** barcode below is scanned.

Write to Custom Defaults

Restore Custom Defaults

Exit Programming Mode
